

AI Resume-to-Interview Coach

Salma

AI Chatbot Developer

No-Code Automation & Prompt

Design

A no-code AI chatbot that reads a candidate's resume, benchmarks it against a target role, and runs a live mock interview with real-time feedback — built end-to-end on Zapier's chatbot platform.

THE PROBLEM

Interview prep is generic — resumes aren't

Most job seekers rehearse the same recycled questions off a blog post, regardless of their actual background or the role they're chasing. Prep that isn't tied to the resume in front of a hiring manager doesn't build real confidence.

THE SOLUTION

A coach that reads the resume first

I designed a conversational AI agent that ingests a candidate's actual resume and target role, scores the fit, then runs a tailored mock interview — mixing technical and behavioral questions with structured, STAR-based feedback after every answer.

01 How It Works

STEP 1 – GREETING

Bot opens the conversation

AI Resume-to-Interview Bot

"Peace be upon you! 🤝
Welcome — I'm your AI Career Coach, here to help you strengthen your resume and prepare confidently for interviews.
To get started, please share your resume or let me know

Warm, on-brand greeting prompts the user to share a resume or target job title — no blank-page confusion.

STEP 2 – INTAKE

User shares their goal

Resume and prepare confidently for interviews.
To get started, please share your resume or let me know the job title you're targeting." How can I help you today?

This is an automated chatbot response. [Learn more](#)

Natural free-text input. The bot doesn't require a rigid form — it parses intent from plain conversation.

STEP 3 – PERSONALIZE

Bot asks a targeting question

preparing interview?

AI Resume-to-Interview Bot

"Absolutely, Sara! I'd love to help you prepare for your interview. To tailor our practice, could you please share the job title or job description you're applying

Before generating anything, it confirms the role — so every question that follows is relevant, not generic.

02 Behind the Build

```
directive.txt – system logic I authored

# OBJECTIVE
Act as an AI Resume-to-Interview Coach. Guide the user through
resume feedback and a tailored mock interview.

CONVERSATION FLOW
1. 01 Collect the resume (PDF or image), if not already shared.
2. 02 Ask for the target job title or job description.
3. 03 Score resume-to-role fit: matched strengths, missing
    keywords, one improvement.
4. 04 Offer a mock interview built around that role.
5. 05 Ask 3–5 tailored questions, mixing technical and behavioral.
6. 06 Give short, structured feedback after every answer (STAR
    method).
7. 07 Close with a strengths/gaps summary and offer another round.

# STYLE – friendly, encouraging, structured with headers &
bullets
```

WHY THIS MATTERS

This is the actual logic layer I wrote — not a default template. It's the difference between "I connected an AI tool" and **I designed how the AI thinks.**

DESIGN DECISIONS

Chose a 7-step guided flow over an open-ended chatbot so the AI never loses the thread — every reply moves the candidate one step closer to interview-ready.

COACHING METHOD

Feedback is scaffolded on the STAR framework, a structure familiar to interview coaches — so the AI's advice reads like a real coach, not a generic chatbot.

03 Tools & Skills

Zapier Chatbots

LLM System Prompting

Conversation Flow Design

No-Code Automation

User Intake Design

AI Product Thinking

Career Coaching Domain Knowledge

Iterative Testing

Built as a self-directed project to demonstrate end-to-end AI chatbot design — from conversation logic to live deployment. **Open to freelance builds** in AI chatbots, workflow automation, and AI-assisted coaching tools.
